7kyu

Is this a triangle?

☆ 1307 ● 286 ↗ 84% of 15,090 ● 73,291 of 198,980 👤 silentZaika ▲ 1 Issue Reported

Instructions

Output

Implement a function that accepts 3 integer values a, b, c. The function should return true if a triangle can be built with the sides of given length and false in any other case.

(In this case, all triangles must have surface greater than 0 to be accepted).

Examples:

```
Input -> Output
1,2,2 -> true
4,2,3 -> true
2,2,2 -> true
1,2,3 -> false
-5,1,3 -> false
0,2,3 -> false
1,2,9 -> false
```

Solution

```
1 def is_triangle(a, b, c):
2     if a > 0 and b > 0 and c > 0:
3         if a + b > c and a + c > b and b + c > a:
4             return True
5     return False
6
```

Correctamundo! You may take your time to refactor/comment your solution. Submit when ready.

Sample Tests

```
1 import codewars_test as test
2 from solution import is_triangle
3
4 @test.describe("Fixed Tests")
5 def fixed_tests():
6     @test.it("Basic Test Cases")
```

7kyu

Sort array by string length

☆ 557 ● 225 ↗ 92% of 4,772 ● 18,405 of 54,279 👤 stevehopkinson ▲ 1 Issue Reported

Instructions

Output

Write a function that takes an array of strings as an argument and returns a sorted array containing the same strings, ordered from shortest to longest.

For example, if this array were passed as an argument:

```
["Telescopes", "Glasses", "Eyes", "Monocles"]
```

Your function would return the following array:

```
["Eyes", "Glasses", "Monocles", "Telescopes"]
```

All of the strings in the array passed to your function will be different lengths, so you will not have to decide how to order multiple strings of the same length.

Solution

```
1 def sort_by_length(arr):
2     return sorted(arr, key=len)
3
```

Correct! You may take your time to refactor/comment your solution. Submit when ready.

Sample Tests

```
1 import codewars_test as test
2 from solution import sort_by_length
3
4 @test.describe("Fixed Tests")
5 def fixed_tests():
```

Exclamation marks series #11: Replace all vowel to exclamation mark in the sentence

☆ 378 ● 152 ↗ 93% of 3,629 ● 12,256 of 41,468 👤 myjinxin2015

Instructions

Output

Description:

Replace all vowel to exclamation mark in the sentence. `aeiouAEIOU` is vowel.

Examples

```
"Hi!" -> "Hi!"
"HiHi! Hi!" -> "HiHi! Hi!"
"aeiou" -> "!!!!!"
"ABCDE" -> "!BCD!"
```

Solution

```
1 def replace_exclamation(s):
2     result = ""
3
4     for char in s:
5         if char in "aeiouAEIOU":
6             result += "!"
7         else:
8             result += char
9
10    return result
```

Correct! You may take your time to refactor/comment your solution. Submit when ready.
